

CMF issues update on cybersecurity incident

- *The analysis ruled out the presence of ransomware. Instead, the detected vulnerability was limited to the Microsoft Exchange platform.*

March 15, 2021 – The Financial Market Commission (CMF) issues an information update on the operational incident reported yesterday, caused by vulnerabilities in the Microsoft Exchange email platform. The analysis carried out by the Commission's Information Security & Technology Area alongside external specialized support rules out the presence of ransomware so far. Instead, this incident is limited to the Microsoft Exchange platform.

The CMF has kept in touch with the Financial Stability Board's operational continuity group, as well as the Ministry of the Interior's Computer Security Incident Response Team (CSIRT), since the vulnerability was detected.

The Commission continues to investigate the incident and makes available to specialists the compromise indicators it has detected to date.
